

## **Renson Algarve Patio Cover**

Our simple and elegant Algarve Patio Cover offers both sun protection & ventilation through a waterproof aluminium roof, with remote controlled louvered roof blades.

The aluminium roof blades rotate up to 150 degrees enabling you to decide how much sun protection / ventilation you would like. When closed, the blades form a waterproof roof in rainfall. A gutter system drains the rainwater away off the roof and down the column legs where it can either naturally drain away or can be connected to a drainage system.

The Algarve can be suitable for any space due to the ability to powder coat it in any RAL colour, and make the size of the canopy millimetre perfect for them tricky spaces!

The customisable options available for the Algarve help to really enhance your outdoor living capabilities. From adding automatic Fixscreen Blinds, to a variety of dimmable lighting, or even sliding panels. All these options are matched to the RAL colour of the structure so that everything matches effortlessly.
